Information Security is the practice of securing data from the hands of unintended users or hackers.

SecureFirst Solutions Private Limited is a Product-sum-Services Organization assisting its clients in developing and maintaining secure applications. Our Offerings are broadly classified into:

- Management & Reporting System
- Security as a Service
- Managed Service
- Software Development
- Annual Maintenance & Support
- On-demand Training
- Threat Intelligence
- Automation
- Business Continuity & Disaster Recovery

Management & Reporting System:

A unique & innovative Product from SecureFirst Solutions, an enterprise cloud-based Vulnerability Management & Reporting System to track all your Security Vulnerabilities across the Secure Software Development Life Cycle (SSDLC).

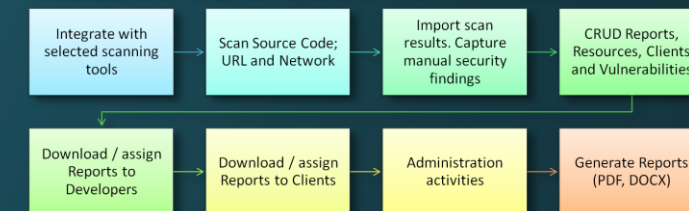

Manage all your Project's Vulnerabilities in one framework. Track reported vulnerabilities to closure and grant access to your Clients directly to download the Security Vulnerability Reports without having to be followed up by your Clients on the progress. Salient features include:

- ✓ Cloud-based Management System
- ✓ Track project version-wise vulnerability
- ✓ Security Requirement Gathering
- ✓ Integration with BSIMM, Commercial & open-source security testing tools
- ✓ Centralized real-time reporting system

Functionality #1: General functionalities

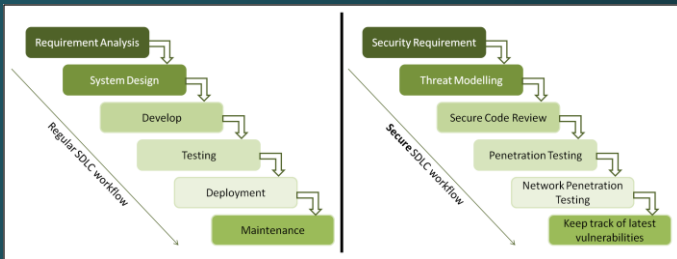

Functionality #2: Scan Integration capability with Commercial and OpenSource Security tools

- **Security as a Service (XaaS):** Security is an integral part of an application. Conducting security assessments across the SDLC is a tedious task, involving right from setting up a dedicated team to all the relevant tools and hands-on expertise. Outsourcing your security assessments will ensure the assessments are conducted by certified security professionals and get the best results along with expert guidance.

Engage us in any /ALL phases of your SDLC program and ensure your applications are hack resilient. We integrate security into SDLC as follows:

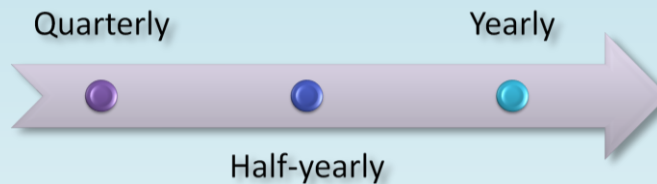

- **Managed Service:** Outsource the most common services thus allowing you to concentrate more on your deliverables.
 - ✓ Information Services, B2B, B2C
 - ✓ Application Management
 - ✓ Supply Chain Management & Procurement, Security Operations

- **Software Development:** We custom-develop softwares to meet your day-to-day demands and ease your client deliverables. As an example, we develop:

- **Annual Maintenance & Support:** We support all your Critical assets.

- **On-demand Training:** We conduct on-demand on-premise corporate trainings.

- **Threat Intelligence:** Hacking incidences such as Ransomware are on the rise via Phishing email attacks. Keeping track of each threat /vulnerability /exploit is a very tedious and time-taking activity.

Sample threat intelligence reports include:

- **Automation:** Automate your day-to-day repetitive tasks with the help of our simple, innovative and customized automation tools /softwares. For example:
 - ✓ Reports, Invoice & Billing Systems
 - ✓ Payroll & Resource Management
 - ✓ Effort Estimates
 - ✓ On-line training & evaluation materials
- **Business Continuity & Disaster Recovery:** Every Organizations goal is to assist its Customers run a smooth business. However with the emerging threats and landscape there is always a threat of losing your Business reputation and Clients.
